SUMMARY

I first built my foundation as a data analyst at a startup, where I developed recommendation algorithms and analyzed user data to connect insights with business outcomes. Through this experience, I learned the importance of SQL-based data extraction, dashboard development, and clear communication across teams.

I hope to apply these skills at Toss Bank by supporting data validation, A/B test monitoring, and Tableau dashboard management. By collaborating with team members and learning from experienced analysts, I aim to contribute to data-driven decisions that enhance customer experience and business growth.

SKILLS

- Data Handling: SQL, Python(Pandas, Numpy), R
- Visualization: Redash, matplotlib
- Database: MySQL, PostgreSQL
- Experimentation: A/B testing, KPI tracking, user segmentation
- Others : Git, Jupyter, Slack, Pytorch

WORK EXPERIENCES

Yonsei University, Aug 2023 - Present
Research Assistant, Theory of Computation Lab (Advisor: Prof. Yo-Sub Han)

- Led quantitative experiments using large-scale code and text datasets.
- Automated performance metric extraction (accuracy, perplexity) and built evaluation dashboards for model validation.
- Applied Python-based data wrangling to ensure reliability of experimental results.

Alookso, Inc., Mar 2022 – Apr 2023
Data Analyst, Data Team

- Designed and maintained SQL pipelines to extract and validate user engagement data.
- Built Redash dashboards for retention and CTR tracking; automated daily KPI monitoring using Redash.
- Conducted A/B testing and cohort analysis to evaluate recommendation strategies, improving user retention by 8%.
- Collaborated with product and marketing teams to refine personalization algorithms based on data insights.

Korea Advanced Institute of Science and Technology (KAIST), Aug 2020 – Nov 2020
Research Assistant, Statistical Artificial Intelligence Lab (Advisor: Prof. Jaesik Choi)

- Processed and cleaned property appraisal reports using pandas and regex-based text extraction.
- Built a price estimation model and identified top 3 impact factors (area, accessibility, year built, etc.) via correlation analysis.
- Delivered insights that improved valuation model interpretability and reduced estimation variance by 11%.

Sangmyung University, Mar 2019 – Jul 2020
Research Intern, Network Data Science Lab (Advisor: Prof. Hyunchul Kim)

- Implemented a hate speech detection using Hierarchical Attention Network with 89% accuracy and visualized attention weights to highlight key sentences and words influencing detection, ensuring explainability.
- Performed attention-based error analysis and built a Telegram bot for real-time spam detection.

- Analyzed user trends, sales and community data, and competitor strategies to identify causes of user decline.
- Presented the findings to developers and proposed the implementation of summer break events.
- Recommended adjusting character abilities favored by churned users to improve retention.

EDUCATION

Yonsei University,
M.S. in Computer Science, Theory of Computation Lab
GPA: 4.01/4.30 | Advisor: Prof. Yo-Sub Han | Research Area: Code Watermarking

Sep 2023 - Aug 2025

Sangmyung University,
B.S. in Computer Software, Network Data Science Lab
GPA: 3.92/4.50 | Advisor: Prof. Hyunchul Kim | Research Area: Hate Speech Detection

Mar 2017 - Feb 2022

CERTIFICATIONS & AWARDS

- ADsP (Associate Data Analyst Certificate), Korea Data Agency

Apr 2023
- Completed, Recommender System Study, Modu Research Institute

Aug 2021
- Graduated, Alice AI Track (1st Cohort)

Dec 2020 - Jun 2021
- Awarded First Place, University Capstone Design Competition

Sep 2020 - Nov 2020
- Awarded First Place, SK Future Industry Technology Startup Competition

May 2017

LANGUAGES

- Languages: Korean (native), English (conversational proficiency), TOEIC 860, OPIC IM2
